

Getting Started with the iPad

Turning iPad ON/OFF -

The iPad goes to sleep all by itself but you can do a "soft" switch-off by quickly pushing the **Power** button on the top edge or by shutting the cover. This puts it in "standby" mode and can be turned on with a tap of the home button or by opening the cover. To completely power down, press and hold the **Power** button on the top right edge. It will ask you to "Slide to Power off." To turn it back on, press and hold the same button.

Network Settings-

In order to access the Internet, check the Wi-Fi connections in **Settings Icon**.

Getting Back Home-

Click the **Home** button to return to the **Home** screen.

Application Store on iPod-

You can get apps right from your iPad. Click on the **App Store Icon** and

search by name, category or popularity. You will need to have an iTunes account to do this even though many of the apps are free.

Shifting Applications-

To move an application on your iPad, press and hold on any application until they start to wiggle. The apps will have boxes around them. Just drag them to move them. To create a folder, drag like apps on to one another and then name your folder. Press the **Home** button to stop wiggling.

Syncing with iTunes-

To get the most from your iPad, you will want to sync it with iTunes. iTunes is an application on your computer that drives your iPad even though you can use your iPad independently in many ways. To do this, plug in the USB cable into the iPad and to the computer. iTunes will automatically open up and your iPod should appear under "Devices." If you click on your iPad you will get a screen that is command central for your iPad.
